SUMMARY

Microsoft Dynamics 365 Business Central Developer with 3+ years of experience across BC development, implementation, and support projects. My work focuses on custom AL development, API integration, and on-premises infrastructure management. I am proficient in AL programming for BC customisation and extension development, building and exposing custom REST APIs using ServiceEnabled Codeunits, OData V4 endpoints, and API Pages, and configuring BC on-premises server instances including multi-instance IIS deployments and Web Service Access Key-based API security. I have delivered BC API codeunits consumed by external frontend applications, extended BC pages to align with integration requirements, built document email notification systems within BC, and integrated external storage solutions via REST API from AL. I also bring hands-on experience with PowerShell-based BC administration using BC Administration Shell cmdlets for server configuration, instance management, and deployment automation.

EXPERIENCE

Business Central Developer

2023 – 2026

Teknohub Solutions — Lagos, Nigeria

- Migrated legacy Navision (NAV) objects to modern AL extensions on Microsoft Dynamics 365 Business Central, rewriting existing business logic into compliant, maintainable AL code.
- Designed and developed a BC API codeunit exposed as a web service, consumed by an external vendor portal frontend to onboard vendors directly into Business Central — incoming vendor registrations were received by the API and created or updated Vendor records in BC.
- Extended the Vendor Card and Vendor List pages in BC to align with the API data structure and frontend application requirements, adding custom fields to ensure seamless data flow between the portal and BC.
- Implemented vendor onboarding supported by a 3-level approval workflow on the portal side; once a vendor cleared all approval stages, the approved record was transmitted to BC via the web service API.
- Built a document notification system in BC that sends automated email notifications to document requesters, keeping them informed of their document status as it progresses through each stage of the approval workflow across different role centers.
- Integrated SharePoint into Business Central for document attachment storage by consuming the SharePoint REST API directly from AL, offloading attachments from the BC database to reduce database footprint.
- Provided development support on the ARM Pension project, resolving technical issues to maintain system stability.

Business Central Developer (Intern)

2022 – 2023

Teknohub Solutions — Lagos, Nigeria

- Supported the ARM Pension project, gaining hands-on, on-the-job experience across core BC modules including CX, DMU, Employer Card, and Client Updates.
- Created SSRS reports (RDL/RDLC) for Employers, Clients, Client Updates, and Biometrics Update, among others.

HR Assistant — Attendance & Data Processing (Intern)

2019 – 2021

FMN (Bagco) — Lagos, Nigeria

- Managed and maintained employee attendance records for a large workforce, processing various leave types (sick, casual, annual) to ensure accuracy and policy compliance.
- Supported the Data Processing Officer in producing periodic HR reports and maintaining audit-ready documentation.

KEY PROJECTS

PROJECT	DESCRIPTION	TECH

ARM ERP (ARM Investment)	NAV-to-AL migration, BC API codeunit, Vendor page extensions, document notification system, SharePoint REST API integration.	AL, BC, SharePoint API
Vendor Portal API	BC API codeunit and web service for vendor onboarding; extended Vendor Card and List pages.	AL, BC API, OData
SharePoint Integration	Consumed SharePoint REST API from AL to store BC document attachments in SharePoint, reducing database footprint.	AL, SharePoint REST
ARM Pension Support	Development support and issue resolution to maintain system stability on the ARM Pension BC implementation.	AL, BC

SKILLS

ERP	Microsoft Dynamics 365 Business Central, Navision (NAV)
BC Development	AL Language, Tables, Pages, API Pages, Codeunits, Extensions, Web Services
API & Integration	ServiceEnabled Codeunits, OData V4, REST APIs, SharePoint REST API
Infrastructure	BC On-Premises Server Setup, IIS Multi-Instance Deployment, Web Service Access Key Security, PowerShell BC Administration Shell
Tools & DevOps	Visual Studio Code, Git / GitHub, Azure DevOps
Productivity	MS Excel, Word, PowerPoint, Outlook

CERTIFICATION

Microsoft Certified: Dynamics 365 Business Central Functional Consultant Associate (MB-800)
Microsoft · Verified credential available on request

Microsoft Certified: Power Platform Functional Consultant Associate
Microsoft · Verified credential available on request

EDUCATION

Higher National Diploma (HND) in Statistics *2021 – 2023*
Yaba College of Technology · Lagos, Nigeria

Bachelor of Science in Business Administration *2021 – 2025*
University of the People (Online) · California, U.S.A

Bachelor of Science in Demography and Social Statistics *In View*
Federal University Oye Ekiti (Yabatech Affiliation) · Lagos, Nigeria
